Background Notes

Source and scope of the Live Register The Live Register is compiled from returns made directly to the Central Statistics Office by each local office of the Department of Social and Family Affairs. It comprises persons under 65 years of age in the following classes:

- ◆ All Claimants for Unemployment Benefit (UB) excluding systematic short-time workers (*see Table 10*)
- ◆ Applicants for Unemployment Assistance (UA) excluding smallholders/farm assists and other self-employed persons (*see Table 11*)
- ◆ Other registrants including applicants for credited Social Welfare contributions but excluding those directly involved in an industrial dispute (*see Table 11*).

Descriptive articles The compilation basis for the Live Register statistics from May 1992 onwards is described in the September 1992 issue of the *Statistical Bulletin*. The March 1980 issue contained a description of the basis used up to April 1992 while a more comprehensive treatment of Live Register statistics appeared in the "Report of the Inter-Departmental Study Group on Unemployment Statistics" (Stationery Office Dublin, Prl.7925, April 1979). The results of a special study of the differences between the Labour Force Survey (LFS) Estimates of Unemployment and the Live Register are contained in the December 1996 issue of the *Statistical Bulletin*.

Unemployment statistics The Live Register is not designed to measure unemployment. It includes part-time (those who work up to three days a week), seasonal and casual workers entitled to Unemployment Assistance or Unemployment Benefit. **Unemployment is measured by the Quarterly National Household Survey** (formerly the Annual Labour Force Survey).

Standardised unemployment rates The Standardised Unemployment Rate (SUR) series in Table 3 is based on the estimated number of persons unemployed expressed as a percentage of the total economically active population (i.e. the Labour Force), using internationally comparable definitions of employment and unemployment, as recommended by the International Labour Office. Benchmark estimates of the SUR for April of each year are calculated from the Labour Force Survey/Quarterly National Household Survey. The monthly trend in the seasonally adjusted Live Register has been traditionally used to estimate the monthly SUR between successive surveys.

This approach was temporarily suspended following the rapid decline in the Live Register after September 1996. A linear interpolation estimation approach was used between April 1996 and April 1997, as the Live Register series could not be used as an indicator of monthly trends in unemployment during that period. The traditional estimation approach has been used from April 1997 onwards.

QNHS The Quarterly National Household Survey, which began in September 1997, has now replaced the Labour Force Survey and provides quarterly estimates of the unemployment rate. The estimates (unadjusted for seasonality) are:

| Year | Q1 % | Q2 % | Q3 % | Q4 % |
|------|---------|---------|---------|---------|
| 1998 | 8.5 | 7.8 | 7.6 | 6.4 |
| 1999 | 5.8 | 5.7 | 5.7 | 5.1 |
| 2000 | 4.7 | 4.3 | 4.3 | 3.9 |
| 2001 | 3.7 | 3.7 | 4.3 | 4.0 |
| 2002 | 4.4 | 4.2 | 4.6 | 4.5 |
| 2003 | 4.6 | | | |

Seasonal adjustment The seasonal adjustment of the Live Register is completed using the X-11 Variant of the US Bureau of Census Method 2 (Additive Option). The seasonally adjusted series are updated twice yearly, in January and July; pending the next updating, seasonal adjustment for intervening months is carried out using projected seasonal factors. In Tables 2a, b and c, the seasonally adjusted totals are the sum of the relevant seasonally adjusted series for males and females, under and over 25 years.

Casual and part time workers The casual and part time workers' figure is based on an estimate supplied by the Department of Social and Family Affairs. People may apply for Unemployment Benefit / Assistance if they only work for part of a week and be included on the Live Register.

History of Flow Analysis The flow analysis of the Live Register had been published monthly as a separate release since January 1989. Similar details were previously included in the Industrial Analysis of the Live Register, which was discontinued.

Live Register Flow Analysis Changes in the level of flows on and off the Live Register in any month reflect conditions in the labour market and aspects of the social insurance system such as transfers to or from other welfare schemes, exhaustion of Unemployment Benefit (UB) entitlement without qualifying for Unemployment Assistance (UA) etc.

New registrations The aggregate of *new registrations* for each Friday in a given month is used in conjunction with the *net change* over the same period to calculate the *outflow* from the register. A *new registration* is defined as anybody on the Live Register on a particular Friday who was not on it on the previous Friday.

Live Register Area Analysis The basis of the area classification used in this release is the Department of Social and Family Affairs local office of registration. The areas served by Local Employment Offices do not correspond to specific geographic boundaries. Therefore, registrants at a given local office do not necessarily come from a particular region or area which can be precisely delineated. A classification by area of residence of persons on the Live Register was published until January 1989 but was then discontinued.

NUTS2 and NUTS3 regions The regional classifications in this release are based on the NUTS (Nomenclature of Territorial Units) classification used by Eurostat. The NUTS3 regions correspond to the eight Regional Authorities established under the Local Government Act, 1991 (Regional Authorities) (Establishment) Order, 1993, which came into operation on 1 January 1994. The NUTS2 regions, which were proposed by Government and agreed by Eurostat in 1999, are groupings of the NUTS3 regions. *See below.*
